

Current Fundraising Project

We are currently raising £48,000 in order to purchase 16 non-invasive ventilators: 8 for Gloucester Royal Hospital and 8 for Cheltenham General Hospital.

- This is life saving equipment.
- Used for short-term ventilatory support when patients cannot breathe in enough oxygen or breathe out enough carbon dioxide.
- There is no need for general anaesthetic and a conventional breathing machine with a tube inserted into the lung.
- The patient remains awake during treatment and so suffers less stress.
